The planning and design of university campuses is one of the ultimate projects in a land planner's portfolio. At Land Design South, we have had the opportunity to work with numerous college level institutions and universities to develop master plans and site plans for the expansion of facilities. Our client list includes: Palm Beach Atlantic College, Palm Beach Community College, Broward Community College, Florida Atlantic University, and Indian River Community College.

One of the major issues in design development for campus expansion is cohesive overall masterplan solutions. It is our role to incorporate new facilities, parking, access points and entrance features with a vision for the future. The new facilities and dormitories need to appear updated to blend with the overall architecture of the campus setting. The dynamics of campus planning requires insightful communication skills. Our approach is to work with the stake holders and campus planners to develop an interconnected plan. We take time to note specific circulation routes, gathering areas, and entrances to buildings.

University level planning recognizes the importance of a sense of place and an identity which students recognize and develop pride for during their educational experience.
